

BeReal Feature Ideas — Growth Roadmap

Top 7 Strategic Features to Increase Monthly Active Users (MAUs)
While maintaining authenticity, spontaneity, and simplicity

#	Problem	Idea	MAU Hypothesis
1	Millennials don't understand BeReal's mechanics (streaks, double camera, posting window)	Clarity Layer — Redesigned onboarding + UI explanations + tooltip system + interest-based discovery	Reduces onboarding churn by 15-25% and increases retention through mechanic transparency
2	No incentive to open beyond daily posting; no health/fitness integration	BeReal Challenges — Health/fitness challenges with hardware integration (Apple Health, Fitbit) + leaderboards	Increases daily active users 10-30% through peer accountability and new engagement loops
3	App requires opening to see updates; high friction compared to widgets	BeReal Widget — Home screen widget for quick photo/video snaps with designated person	Increases daily opens 20-40% through constant visibility and friction reduction
4	Users lose streaks, don't understand why, lose trust in the app mechanics	Streak Proof — Cryptographically-signed daily proof system with transparent timeline + mercy restore	Improves retention 10-15% by building trust and removing mechanic confusion for millennials
5	Posting feels lonely; no way to create intimate moments with close friends	Shared Moments — Two friends schedule a private moment to post together at same time	Increases engagement and retention 5-10% through relationship deepening and weekly rituals
6	Moments feel ephemeral; no long-term artifact or reason to maintain consistency	Life Timeline — Auto-generated yearly printable yearbook (30-50 pages) organized by people and moments	Increases annual retention 10-20% through artifact creation and monetization (\$30-50 per book)
7	No trust infrastructure for authenticity in an AI-generated world	Attestation — Friends verify moments as 'authentic' with 1-minute tap; verified posts get badge	Increases engagement 5-15% and positions BeReal as trust-first app for anti-deepfake future

Implementation Timeline

Phase 1 (Weeks 1-6): Clarity Layer

Phase 2 (Weeks 7-14): Widget + Streak Proof

Phase 3 (Weeks 15-20): Challenges + Shared Moments

Phase 4 (Weeks 21-28): Life Timeline + Attestation

Total Potential Impact: 30-55% increase in MAUs over 6-7 months
